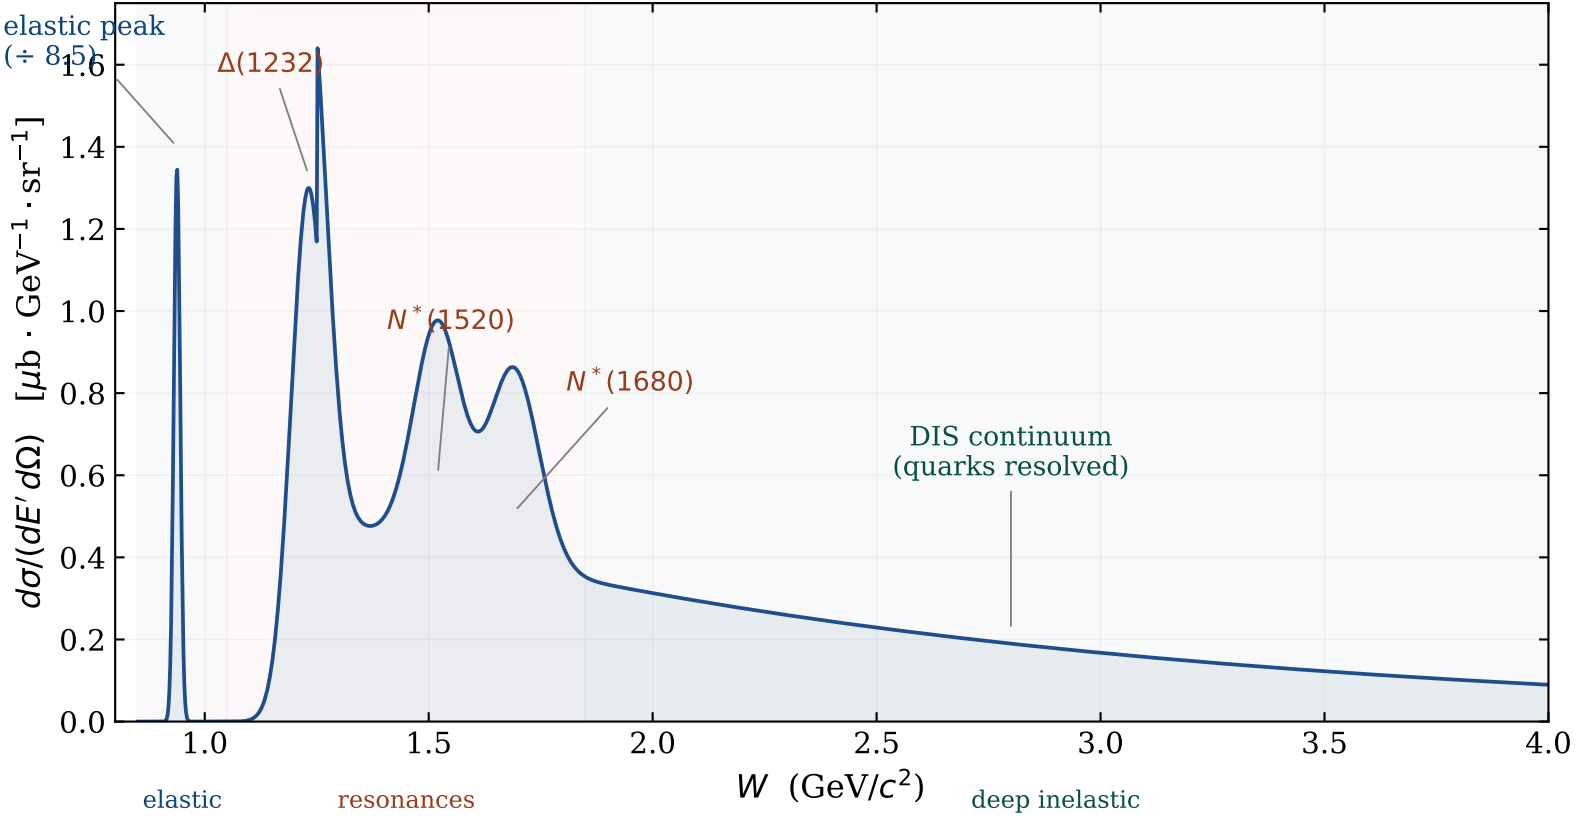

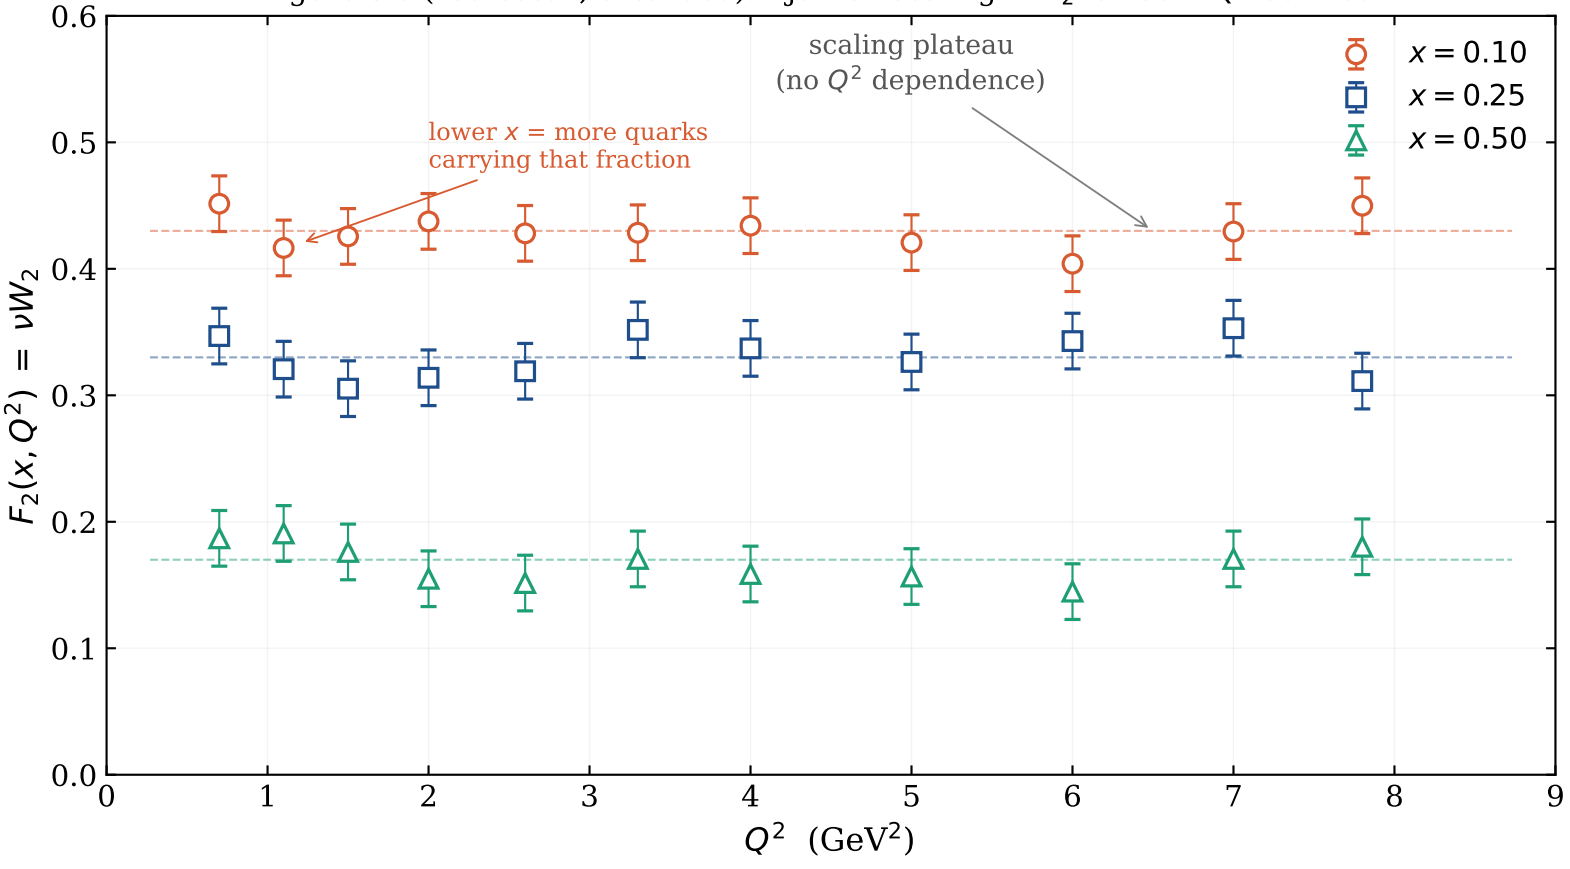

Figure 8.5 (recreated): inclusive $e^- p$ cross section
$E = 10$ GeV, $\theta = 6^\circ$

Figure 8.6 (recreated, extended): Bjorken scaling — F_2 is flat in Q^2 at fixed x
scaling plateau
(no Q^2 dependence)
lower x = more quarks
carrying that fraction
$x = 0.10$
$x = 0.25$
$x = 0.50$
$F_2(x, Q^2) = \nu W_2$
Q^2 (GeV^2)
